Website LinkedIn GitHub

Summary

Software Engineer specializing in full-stack web development and secure infrastructure deployment. Experienced in building custom PHP and WordPress solutions, ERP extensions, and automated data pipelines, alongside designing and automating resilient network services Focused on security, performance, and solving complex operational challenges through open-source tools and scalable system architecture.

Work Experience

Full Stack Developer Sep 2025 - Present

Cosmodata Hardware and IT Solutions • Athens, Greece

- Developed and maintained custom PHP code for the company's website and WordPress environment, implementing tailored functionality and supporting ongoing site enhancements.
- Developed automated data pipelines for mass ingestion of supplier XML feeds, handling bulk updates to product specs, categories, and warehouse DB metrics (dimensions/weight).
- Built and deployed modular extensions for the company's ERP system (PHP/Slim framework) to improve system usability and data input efficiency for internal staff.
- Implemented a responsive asset deployment system, giving administrators a user-friendly interface to manage and route mobile vs. desktop product banners efficiently.

Projects

Antonmail Self Signup Service Jul 2025 - Present

PHP,MySQL, Nginx, Google OAuth API, Linux (System-level provisioning), Bootstrap

Thesis Project Sep 2024 - Jul 2025

Design and development of a custom Android version with a focus on security.

Personal DNS Server Jul 2021 - Present

Secure, properly firewalled VPS-hosted DNS server configured with BIND and outbound support.

Personal VPN Server Jun 2021 - Present

Properly firewalled VPS-hosted VPN server configured for OpenVPN, ensuring secure name resolution and private client traffic routing.

Mail Server May 2021 - Present

Hosted a fully functional mail server with spam filtering DKIM support and DMARC reports.

Education

University of West Attica Sep 2019 - Jul 2025
